

Morphological variation in Kildin Saami

Ilya Egorov

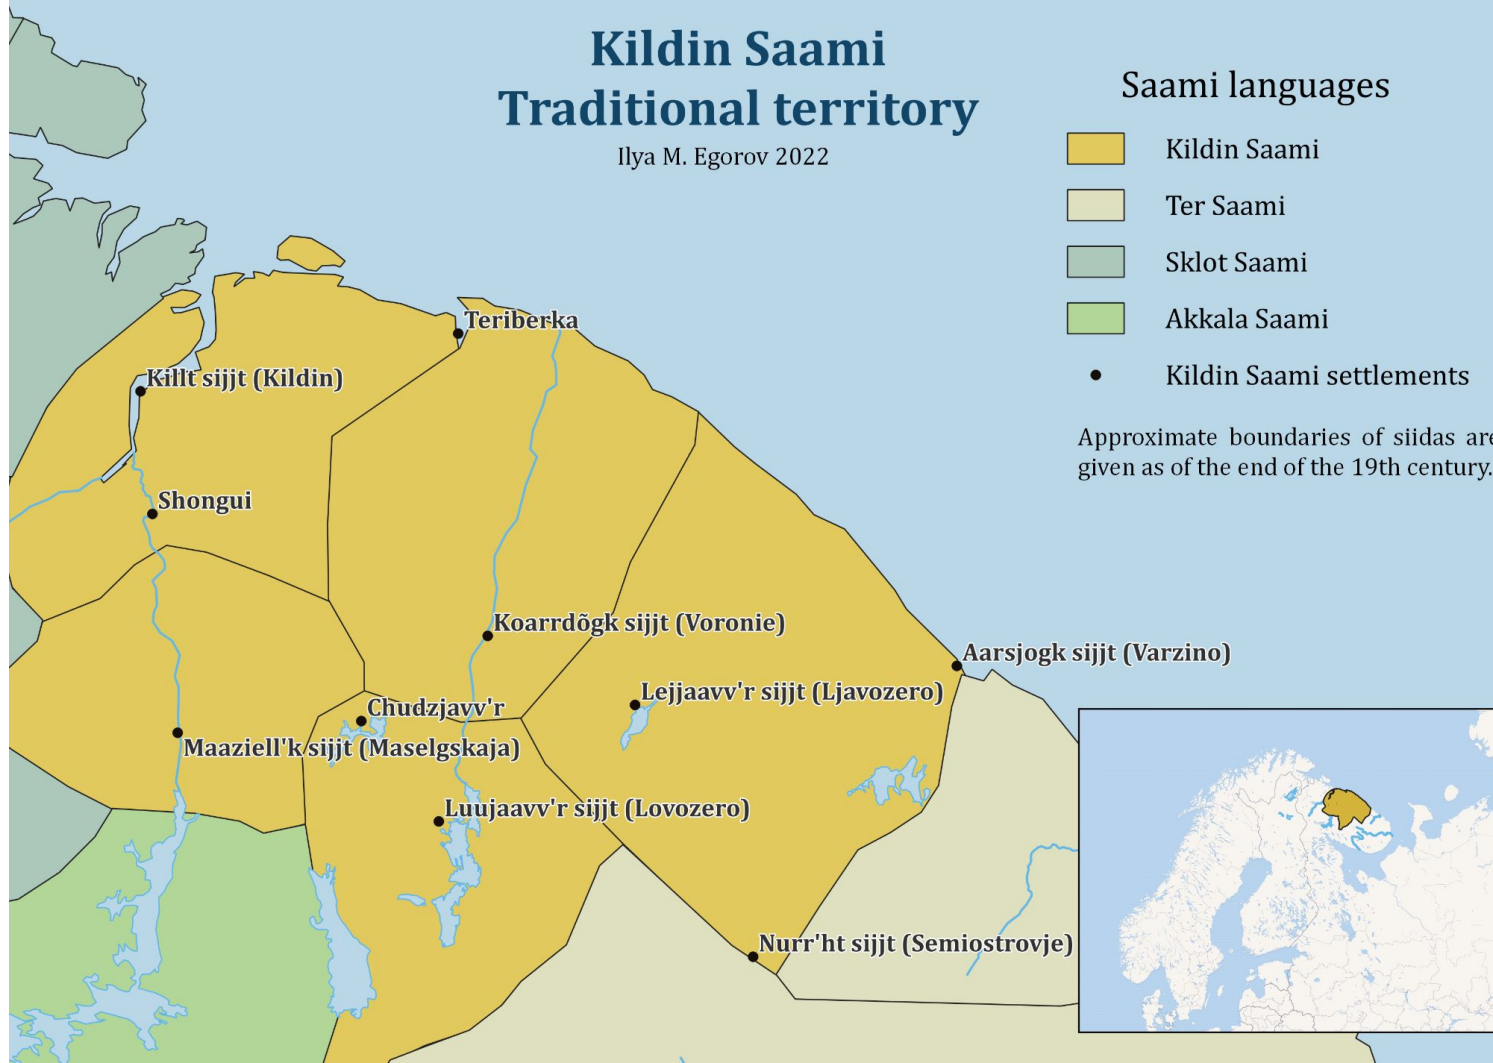

Kildin Saami Traditional territory

Ilya M. Egorov 2022

Saami languages

-  Kildin Saami
-  Ter Saami
-  Sklot Saami
-  Akkala Saami
-  Kildin Saami settlements

Approximate boundaries of siidas are given as of the end of the 19th century.

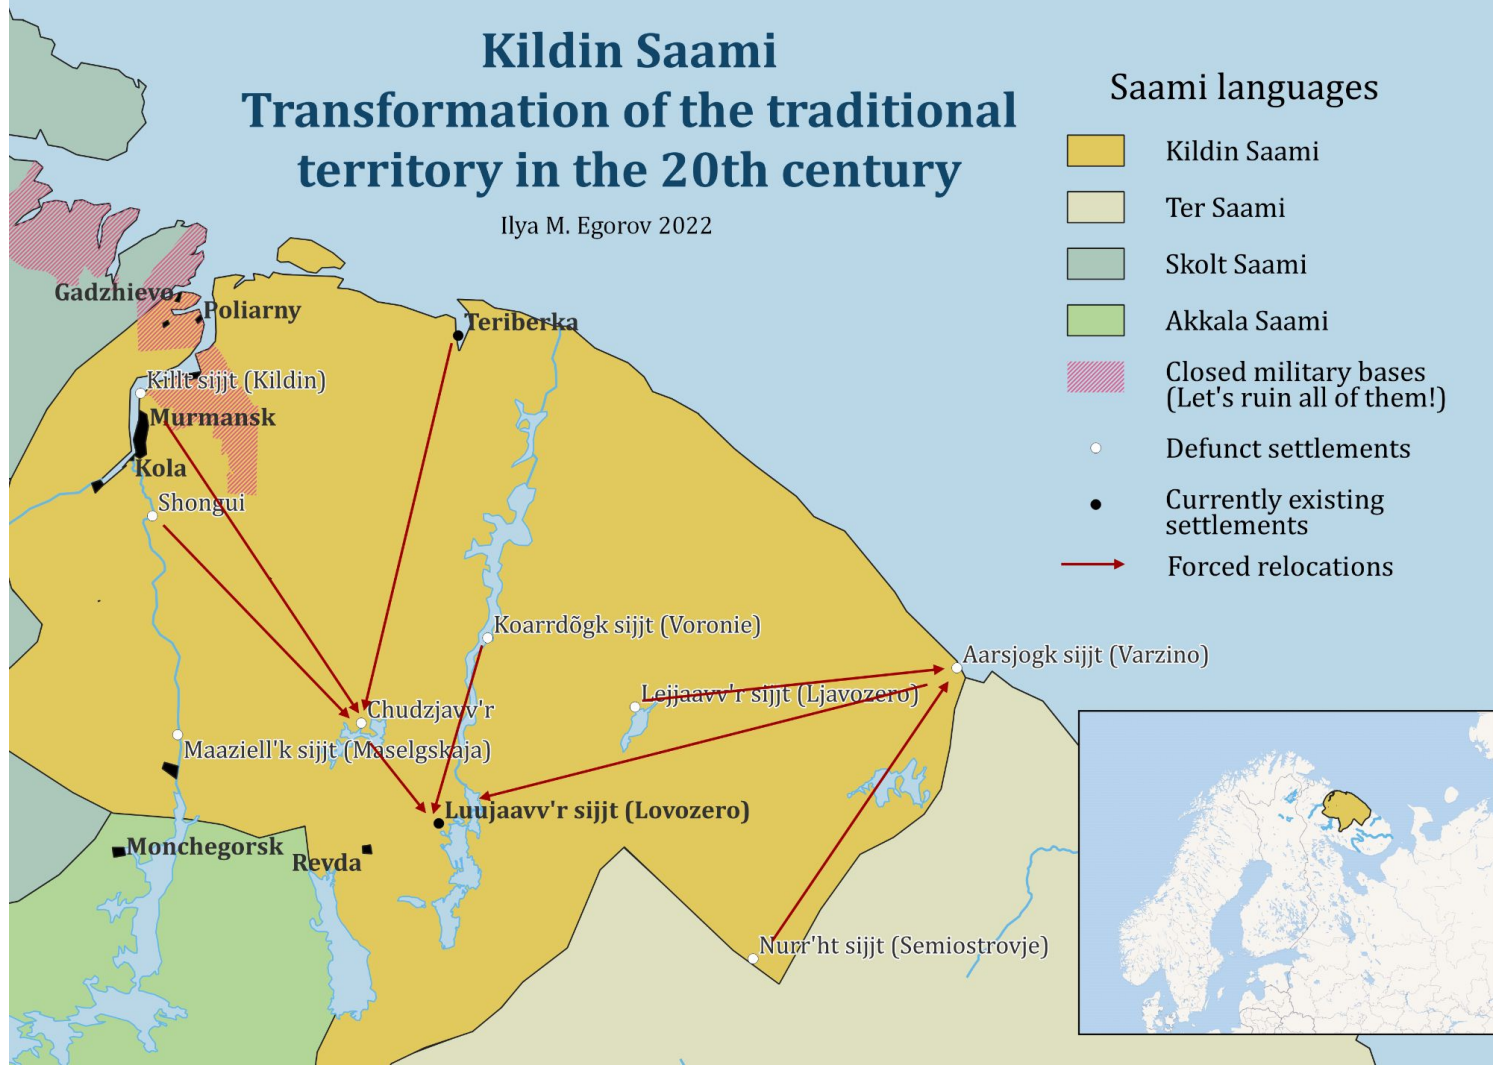

Kildin Saami

Transformation of the traditional territory in the 20th century

Ilya M. Egorov 2022

Saami languages

-  Kildin Saami
-  Ter Saami
-  Skolt Saami
-  Akkala Saami
-  Closed military bases (Let's ruin all of them!)
-  Defunct settlements
-  Currently existing settlements
-  Forced relocations

Dialectal \ ideolectal subgrouping

Focus of the present study

Variation in inflexion:

- Forms of affixes
- Variation in alternations:
 - Vocalic alternations in roots
 - Consonant gradation
 - On morpheme borders

Types variation:

- Dialectal variation
- Diachronic variation
- Idiolectal variation
- Free variation

Potential sources of morphological variation

- Different development of the forms of proto-language
 - Different patterns of analogical leveling ←
 - Different stages of (de)grammaticalization ← ?
 - Borrowing of affixes
-
- Effects of different phonological processes ←

Apocope → Diachronic variation

Some dialects are affected by dropping off of final syllables of the structure *-VC_[+sonorant] (apparently, somewhat different rules for final nasals and j).

Proto-Saami **vuosŋon* > Luujaavv'r, Koarrdõgk **vuesk** ~ Chudzjaavv'r **vueskan** 'perch'

However, the rule does not work as a strict sound law in inflectional forms.

Proto-Saami **vearo-n*, **vearo-m* > **v'aar** 'soup.GEN/ACC.SG'

but

Proto-Saami **laavlo-m* > **laavl-e** 'sing-PRS.1SG'

Apocope → Diachronic variation

	Proto-Saami	Halász 1881	Lehtiranta 1985	Modern field data
1SG.PRS	*-m	<i>sārn-am</i>	<i>kul-am</i>	<i>saarn-a</i> <i>kul-a</i>
ACC.SG	*-m	<i>kīd-'</i>	<i>kīd-ě</i>	<i>kiid</i>
GEN.SG	*-n	<i>kīd-'</i>	<i>kīd-ě</i>	<i>kiid</i>
NOM.PL	*-k	<i>kīd-'</i>	<i>kīd-ě</i>	<i>kiid</i>
2SG.PRS	*-k	<i>sārn-aχ</i>	<i>kul-aχ</i>	<i>saarn-aχ saarn-ak</i> <i>Kul-aχ kul-ak</i>
GEN.PL	*-j	<i>kīd-ij</i>	<i>kīd-ej</i>	<i>kiid-e</i>

Analogical leveling → Dialectal variation

Paradigm of diminutives *CVCV-ńće-

	Killt / Shongui / Teriberka	Chudzjaavv'r	Koarrdõgk	Luujaavv'r
NOM.SG	<i>nijp'-eńč</i>	<i>nijp'-eńč</i>	<i>nijp'-a</i> <i>nijp'-eńč</i>	<i>nijp'-a</i>
GEN.SG	<i>nijp'-a</i>	<i>nijp'-eńč (?)</i>	<i>nijp'-a</i>	<i>nijp'-a</i>
ACC.SG	<i>nijp'-a</i>	<i>nijp'-eńč (?)</i>	<i>nijp'-a</i>	<i>nijp'-a</i>
DAT.SG	<i>nijp'-ń-a</i>	<i>nijp'-eńč-e</i>	<i>nijp'-ń-a</i>	<i>nijp'-ń-a</i>
COM.SG	<i>nijp'-an'</i>	<i>nijp'-eńč-en'</i>	<i>nijp'-an'</i>	<i>nijp'-an'</i>
...	

Analogical leveling → Idiolectal variation

The antiquity of the forms *must*, *tost*, *sost* (LOC.SG of personal pronouns) is proven by the North Saami forms *mus*, *dus*, *sus*.

Published sources	Shongui	Killt	Teriberka	Kuardõgk	Luujaavv'r	
LOC.SG (pers. pronouns)	<i>must</i> ~ <i>munest</i>	NA	<i>must</i> ~ <i>munest</i>	<i>must</i>	<i>must</i>	
Field data	Chuudzjaavv'r		Kuardõgk		Luujaavv'r	Aarsjogk
LOC.SG (pers. pronouns)	<i>must</i> FZA, ShNS	<i>munest</i> LGP	<i>must</i> ~ <i>munest</i> AAM, KhDM	<i>must</i> JuUM, JaAI, GGM	<i>must</i> POG, GGV	<i>munest</i> ANE

Dialectal features → idiolectal features

Published sources

	Shongui	Killt	Teriberka	Kuardõgk	Luujaavv'r
POT.1PL	-eb	-eb	-eb	-em'	-em'
POT.3PL	-en'	-en'	-ev	-en'	NA

Field data

	Chuudzjaavv'r		Kuardõgk		Luujaavv'r
POT.1PL	-eb FZA, LNF	-em' ShNS	-eb AAM, JuUM, JaAI	-em' KhDM, GGM	-em' POG, GGV
POT.3PL	-en' FZA, LNF	-ev ShNS	-ev AAM, JuUM, JaAI	-en' KhDM, GGM	-en' POG, GGV

Dialectal features: elimination of old features

	Shongui	Killt	Teriberka	Kuardõgk	Luujaavv'r
PTCP.PST	-enč -menč	-enč -menč	-enč ~ -a -menč ~ -a	-a -ma	-a -ma

Now all speakers produce only the forms of PTCP.PST in *-a* and *-ma*.

They accept the forms in *-enč* and *-menč* as ones from a foreign dialects.

The speakers from Luujaavv'r claim that “people from Koarrdõgk sijt or Chuudzjaavv'r speak in this way”. The speakers from Koarrdõgk sijt claim that “people from Chuudzjaavv'r or Luujaavv'r speak in this way” etc.

Dialectal features: new features?

Simplification ?= language attrition

Simplification of some idiosyncratic morphological patterns is not necessarily a symptom of language attrition. However, it can be regarded as such in the case of Kildin Saami. Other structural and (impoverishment of the lexicon, loss of some phonological oppositions) and sociolinguistic factors (appearance of language activism, lack of younger speakers) indicate language attrition as well.

Simplification ?= language attrition

Elimination of less trivial inflectional classes

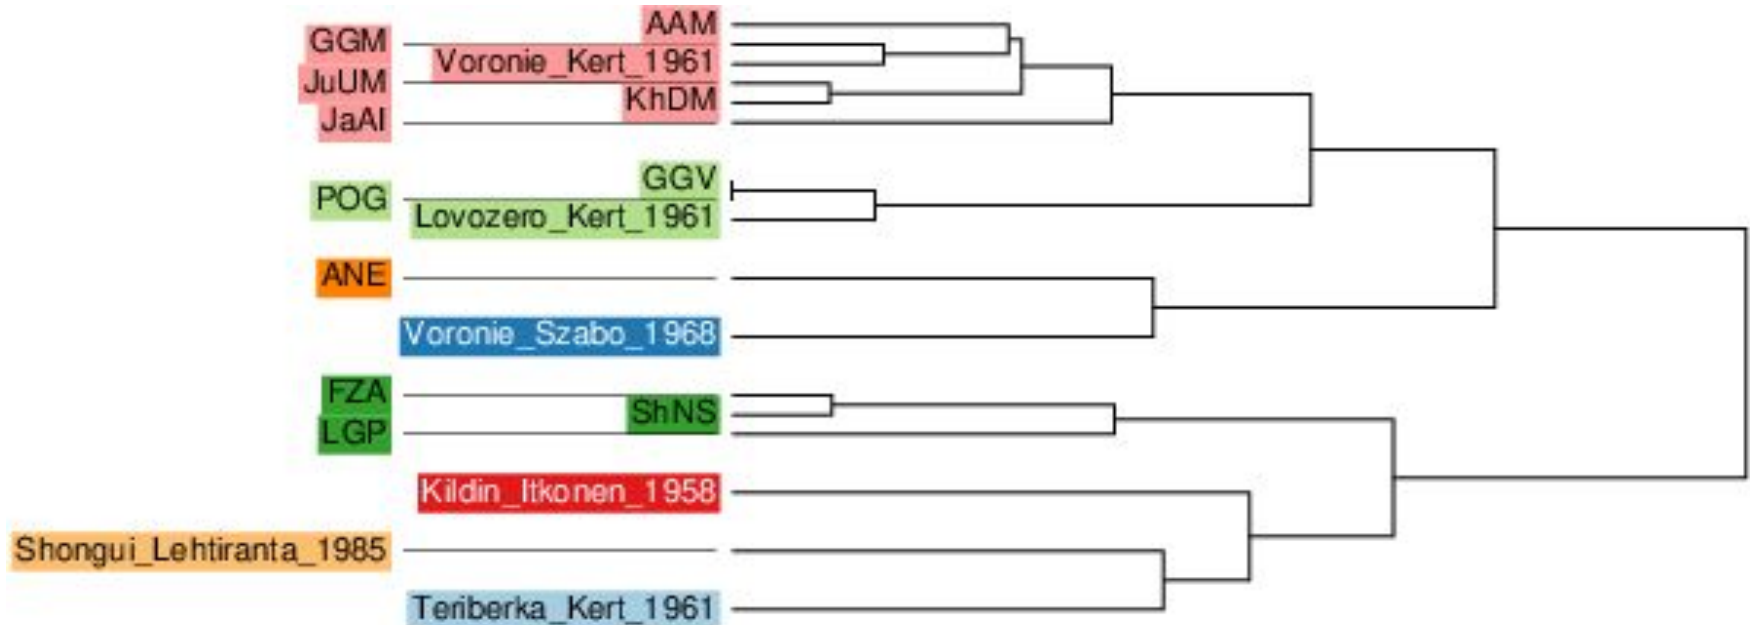

<i>jeem'p'er</i> 'bucket.nom.sg'	<i>jammpar</i> 'bucket.acc\gen.sg'	>	<i>jeem'p'er</i>	<i>jammpar</i>
<i>čiigar</i> 'cattle.nom.sg'	<i>čiiggr-e</i> 'cattle.acc\gen.sg'	>	<i>čiigar</i>	<i>čiigar</i>
<i>kuuss</i> 'pine.nom.sg'	<i>kuuz</i> 'pine.acc\gen.sg'	>	<i>kuuss</i>	<i>kuuz</i>
<i>kuus's</i> 'guest.nom.sg'	<i>kuus's</i> 'guest.acc\gen.sg'	>	<i>kuus's</i>	<i>kuuz'</i>

Simplification of distribution of allophones

Proto-Saami	NOM.SG	DAT.SG		NOM.SG	DAT.SG
*-Cē	C ^j	C-a		C ^j	C-a
*-Cō	C	C-e	>	C	C^j-e
*-Cẹ	C	Ci-e		C	Ci-e

Idiolectal variation

Currently observed inter-speaker variation is a sum of old inherited dialectal features and idiolectal variation. Modern idiolects can be clustered into groups reflecting older dialectal differentiation.

Conclusions

- Diachronic, dialectal and idiolectal variation can be observed in the existing Kildin Saami data.
- Four dialects which correspond to four sijjtes can be distinguished: Western (Killt sijjt, Shongui, Teriberka, Chuudzjaavv'r), Luujaavv'r sijjt, Koarrdõgk sijjt, and Aarsjogk sijjt.
- Modern idiolects only partially reflect old dialectal differentiation.
- A lot of parameters of variation in inflectional markers reflect indeed different stages of phonological processes.
- Some parameters of idiolectal variation can be treated as symptoms of language attrition.
